## Revenue by Country

## **Revenue Trend**

Total revenue reached **11.5 M**, with the **fourth quarter consistently delivering the highest margins**. February recorded the lowest sales, revealing clear seasonality in demand. This pattern highlights opportunities to **boost weaker months** through targeted promotions, bundled offers, or limited-time campaigns.

## **Customer Insights**

The business served **4,373 distinct customers**, split between **31 % one-time buyers (1,319)** and **69 % repeat customers (3,059)** — a strong **69 % retention rate**. The most popular product is **StockCode 23843**, driven by its **high quantity sold and affordable pricing**, proving that accessibility fuels volume. Some customers, such as **CustomerID 16446**, purchase in large quantities and could qualify for **wholesale discounts or loyalty programs** to encourage continued engagement.

## **Product Performance**

Top-selling products include **StockCode 23843**, **AMAZONFEE**, and **M**. An **inverse relationship** exists between sales volume and revenue:

- High-volume items like 23843 (avg price 2.08) yield lower revenue per unit.
- Premium items like AMAZONFEE (avg price 7,324.78) sell fewer units but contribute significantly to total revenue. **Insight:** Profitability depends on a balanced **pricing strategy and product mix** — combining affordable, high-volume items with premium offerings to maximize margins.

## **Revenue by Country**

The **United Kingdom** leads in revenue, product quantity, and customer base, confirming its role as the primary market. Other countries contribute marginally, creating a **concentration risk**. **Insight:** While the UK drives growth, expanding into underperforming regions could **diversify and stabilize revenue streams**.

## **Recommendations**

1. **Seasonality Strategy** → Launch promotions or bundles in low-revenue months (e.g., February) to smooth revenue cycles.
2. **Customer Conversion** → Target one-time buyers with loyalty programs or personalized discounts to increase repeat purchases.
3. **Product Mix Optimization** → Retain high-volume products like 23843 for engagement, but emphasize premium items to lift margins.
4. **Geographic Diversification** → Develop marketing and distribution strategies in non-UK markets to reduce reliance on a single region.
